The third riding mode has progressive acceleration and 95% maximum speed

It is made for difficult grip conditions.

3. TRIAL 2

The fourth riding mode has direct acceleration and 100% maximum speed.

3.2.3. RIDING

During the first ridings, be careful, electric motorcycle is quite different than Internal Combustion Engine motorcycles (2 or 4 strokes).

Begin with the first riding modes to discover this motorcycle.

Go to other MAPS if the riding of the motorcycle is OK.

For trial application, replace the front 11 teeth sprocket by the 9 teeth furnished sprocket.

3.2.4. ELECTRONIC CLUCH (Sport model ou option)

To be perfectly adapted to trial driving, the EM 5.7 has an electronic system: ELS.

The ELS system (Electric Lever Switch) allows you:

- To cut instantly the power of the motorcycle.
- With the combined effect of the throttle and the ELS lever, to have a very precise action of throttle.
